Date: September 22, 2026

Part 1 – System Information

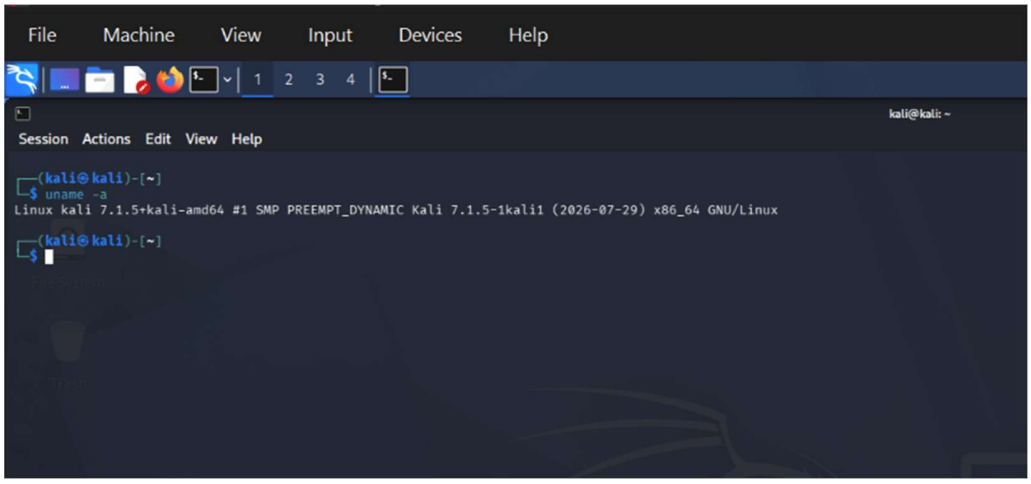

Step 1

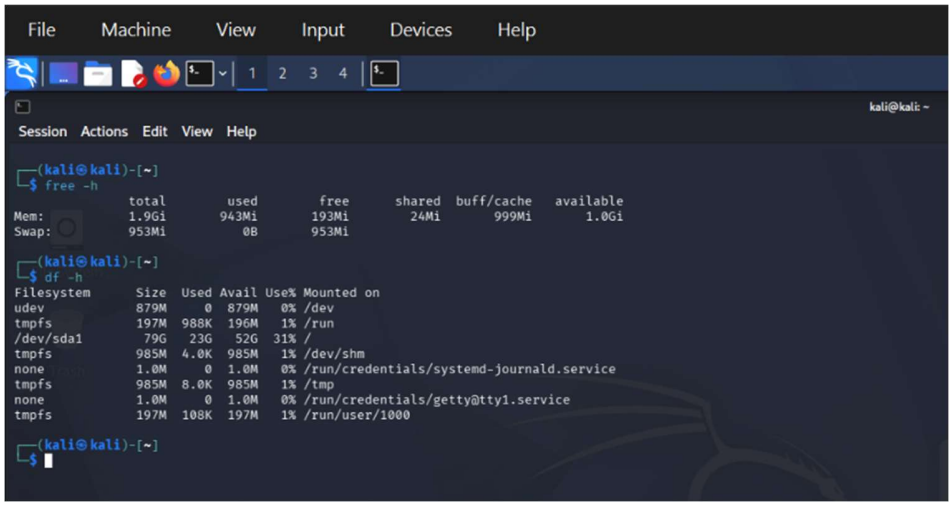

Screenshot showing the output of all 3 commands

- Username: kali
- Host name: kali
- Directory: home

Step 2

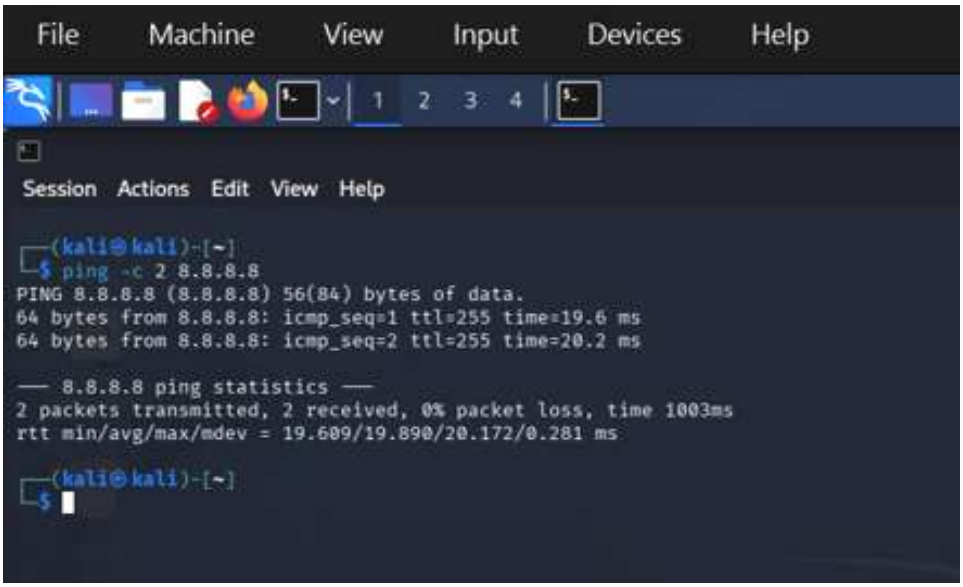

Screenshot of uname -a output

Screenshot of free -hand df -h output

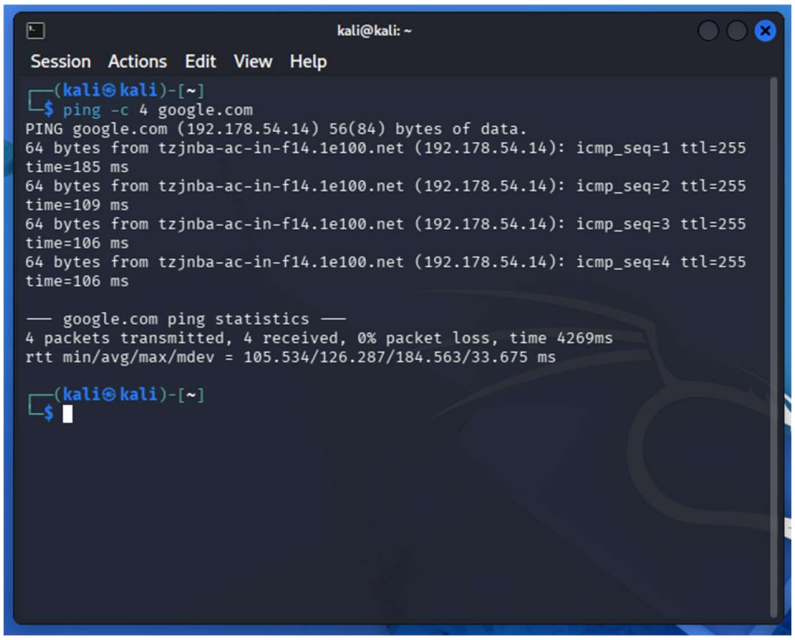

- Total RAM: 1.9GB
- Available disk space on the main partition: 52G
- Kernel version: 7.1.5+kali-amd64

Part 2 -Basic Network Connectivity Test

Screenshot of the full ping -c 2 8.8.8.8 output including the statistics summary

- Average round-trip time: 19.890 ms
- Both packets sent were received successfully. Therefore, there was no packet loss

Screenshot of the full ping -c4 google.com output

- IP address of google.com - 192.178.54.14
- The round-trip time was different
  8.8.8.8: 19.609 ms
  google.com: 105.53 ms
  The difference is because they use different IP addresses and network routes, so one can take longer to respond than the other.
- -c4 tells the ping to send exactly 4 packets. Without that, the ping keeps running until it is manually stopped
